

SANJANA BOGGARAM J

B-Tech Student in Computer Science

+91 9066773444 | sanjana.boggaram28@gmail.com | [LinkedIn](#) | [GitHub](#) | Bengaluru, Karnataka

Experience

Happiest Minds Technologies –Data and AI Intern

Bengaluru, Karnataka 05/2025–07/2025

- Built an end-to-end Data Exploration and analysis tool using **agentic AI** where the user can enter their database and perform exploratory analysis, data cleaning and draw insights from the data and using natural language. Added memory to the chat interface as well.
- Used **Langgraph** for orchestration, Streamlit for the front-end and deployed it on Azure.
- EDA and predicting Shipment Delay on a **Supply Chain Management dataset**.

CDSAML-PESU- Research Intern

Bengaluru, Karnataka 06/2024-08/2024

- Worked on a video question answering model which captures temporal information using deep-learning models.
- Extracted key-frames from video based on similarity metrics, **generated image captions from the key-frames using Florence**
- The captions were then combined into a single coherent video caption, capturing the temporal information.
- Utilized **RoBERTa** fine-tuned on SQUAD dataset to generate answers to user questions using the context provided by the generated caption.

Education

- B.Tech CSE**, PES University Ring Road Campus – CGPA: 8.69 (2022–Present)
- Pre-University**, RV PU College – 94.5% (Centums in PCM) (2020–2022)
- High School**, Auden Public School – 98.20% (2017–2020)

Projects

Generative-AI LLM for precision farming- (RAG, Agentic AI, CNN, Whisper, FAISS vector store, **LoRA fine-tuning**, Random Forest)

- Implemented an agentic chatbot (multi-modal and multi-lingual) for precision farming with **RAG** workflow which utilizes **FAISS vector store**. Prepared a database from scraping data from trustable sources, followed by tokenizing, embedding and storing it in a vector database.
- Includes plant disease detection **CNN Efficient-net** which takes the image of the plant leaf. Added **Random forest** models which predict crop yield, fertilizer and suggests crop to grow based on temperature and soil moisture information retrieved from sensors and weather API.

Data Analytics- (Tensorflow, NumPy, Pandas)

- Performed EDA, data cleaning, feature engineering and for data supply chain management followed by prediction of Shipment Delay risk using machine learning models such as **Random Forest**, **XGBoost**, **MLP** and models from **PyTabKit**.
- Used PCA to reduce the number of features. Also performed feature ranking and hyperparameter tuning to increase the accuracy.
- Forecasted time series of fares for different vehicle types in a vehicle rental service using **SARIMA**, **SARIMAX** and **XG-Boost**.

Movie Booking Application | MERN Stack

- Developed a full-stack MERN web application for movie booking using **Express.js**, **Node.js** for backend, **MongoDB** as the database and **React.js** for frontend.
- Developed a RESTful API using Express.js for users to browse and book movies from a catalog, with real-time updates to MongoDB for booking and inventory management. Caters to different user roles (admin role and regular users).

Application Monitoring Dashboard

Grafana, Kafka, MySQL, Docker

- Built a Log analytics Platform designed to collect, process and visualize log data in real time. It leverages **Grafana** for visualization, **Kafka** for real-time log ingestion, and **MySQL** for storage.
- Containerized all components using **Docker**.

Ongoing Project- Ongoing research on deflecting adversarial attacks on images in DNNs using noise-fusion techniques.

Certification and Achievements

- Datathon Second Place- Secured second place in Datathon by Aura-Pes. [Certificate](#)
- Hackathon Achievement- Ranked top 10 amongst 50 teams in Kodikon 2.0 a National-level 36-hour hackathon. [Certificate](#)
- Hackathon Best of Track- Received 'Best of track' award in a 30-hour hackathon held by REVA University. [Certificate](#)
- Hackathon Second Place- Awarded second place amongst 40 shortlisted teams in a 36-hour hackathon organized by Shunya. [Certificate](#)
- Hackathon Third Place- Secured third place among 36 shortlisted teams in Mahil-AI 12-hour hackathon. [Certificate](#)
- Hackerrank problem solving intermediate certificate- [Certificate](#)
- Supervised Machine Learning: Regression and Classification from Coursera- [Certificate](#)
- Advanced Learning Algorithms from Coursera- [Certificate](#)

Skills and Languages

Languages: C/C++| Python| CSS| HTML| Java| JavaScript

Tools: MongoDB| MySQL| React| TensorFlow | Docker| NumPy| Pandas | Langgraph
